Introduction

The **Online Canteen Management System** is a web-based platform for campus food ordering. It allows users to browse menu items, place orders, make payments, and track order status digitally while helping the administrator manage menu, stock, and orders efficiently.

Target Users

- ▶ Students
- ▶ Faculty and staff
- ▶ Canteen administrator
- ▶ Kitchen staff

Digital Ordering

Faster and easier food requests

Less Waiting

Reduces crowd at the counter

Problem Statement and Objectives

Current Problems

- ▶ Long queues during break time
- ▶ Manual order handling is slow
- ▶ Order mistakes are common
- ▶ No live status tracking
- ▶ Difficult sales and stock management

Project Objectives

- ▶ Provide online food ordering
- ▶ Reduce waiting time
- ▶ Improve order accuracy
- ▶ Support digital payment
- ▶ Help admin manage menu and orders

Core Modules

User Module

Register, login, browse menu, add to cart, and place orders.

Order Module

Order summary, order history, order status, and confirmation.

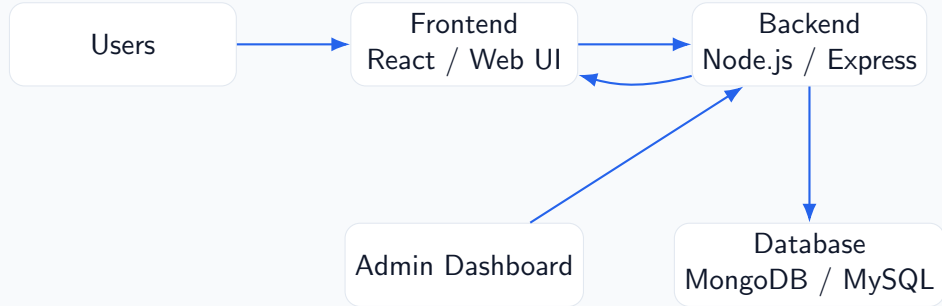

Admin Module

Manage menu items, prices, stock, users, and incoming orders.

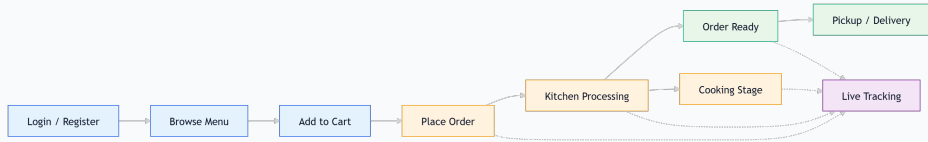

Order Lifecycle Module: Manages order flow from placement to completion with status updates.

System Architecture

The system connects users with a frontend interface, processes requests in the back-end, and stores all menu, order, and payment data in the database.

Order Workflow

Users log in, browse the menu, add items to cart, and place an order. The system then processes the order in the kitchen, updates real-time status, and finally delivers or allows pickup of the food.

Technology Stack

Frontend

- ▶ HTML, CSS, JS
- ▶ React.js
- ▶ Tailwind
- ▶ Axios

Database

- ▶ MongoDB
- ▶ Users data
- ▶ Menu items
- ▶ Orders

Backend

- ▶ Node.js
- ▶ Express.js
- ▶ REST APIs
- ▶ JWT Auth

Tools

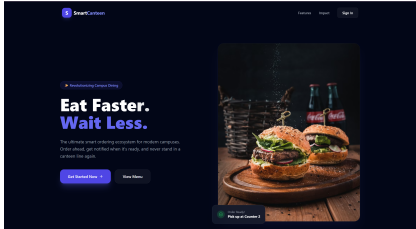

- ▶ Git GitHub
- ▶ VS Code
- ▶ Postman
- ▶ AWS

Database Design

Users	userId, name, email, password, role
MenuItems	itemId, itemName, category, price, stock, availability
Orders	orderId, userId, itemList, totalAmount, status, timestamp

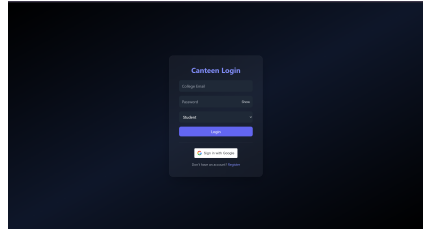

A user can place multiple orders, each order contains menu items, and every order is associated with a payment record and order status.

Interface Screens

Landing Page

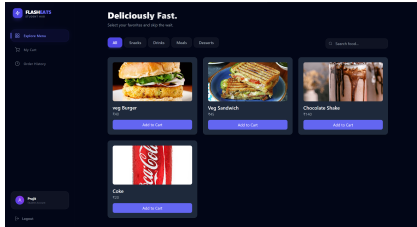

Home page showing menu highlights and system overview

Login / Register Page

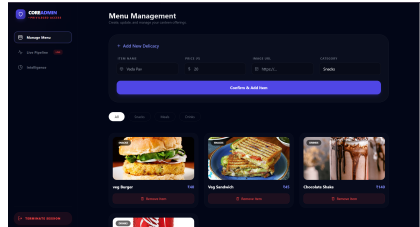

Users authenticate to access dashboard and place orders

Interface Screens

Student Dashboard

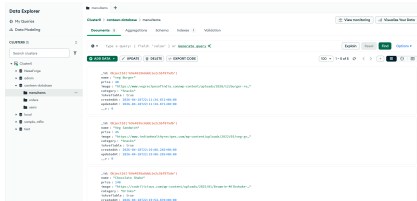

User can browse menu and select items

Admin Dashboard

Admin manages orders, menu, and users

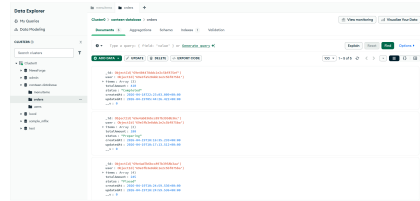

Database: Menu Items & Orders

name	category	price	status
"Burger King"	"Burger"	100	"Available"
"McDonald's"	"Burger"	120	"Available"
"KFC"	"Burger"	110	"Available"
"Wendy's"	"Burger"	130	"Available"
"Sonic Drive-Ins"	"Burger"	140	"Available"
"Burger King"	"Burger"	100	"Available"
"McDonald's"	"Burger"	120	"Available"
"KFC"	"Burger"	110	"Available"
"Wendy's"	"Burger"	130	"Available"
"Sonic Drive-Ins"	"Burger"	140	"Available"

Menu Items Collection

Stores food name, category, price

userId	items	totalAmount	status
"1234567890"	"Burger King"	100	"Completed"
"1234567890"	"McDonald's"	120	"Completed"
"1234567890"	"KFC"	110	"Completed"
"1234567890"	"Wendy's"	130	"Completed"
"1234567890"	"Sonic Drive-Ins"	140	"Completed"
"1234567890"	"Burger King"	100	"Completed"
"1234567890"	"McDonald's"	120	"Completed"
"1234567890"	"KFC"	110	"Completed"
"1234567890"	"Wendy's"	130	"Completed"
"1234567890"	"Sonic Drive-Ins"	140	"Completed"

Orders Collection

Stores user orders, items, total amount, and status tracking

Benefits and Future Scope

Benefits

- ▶ Faster service
- ▶ Improved order accuracy
- ▶ Better user convenience
- ▶ Easy admin management

Future Scope

- ▶ Payment Integration
- ▶ Mobile Application Support
- ▶ Delivery tracking system
- ▶ User feedback and rating System

Conclusion

The **Online Canteen Management System** provides a professional digital solution for campus food ordering by reducing waiting time, improving order management, and supporting a better user experience for both customers and canteen administrators.
