What is Online Canteen Management System?

Online Canteen Management System is a web-based platform designed to simplify food ordering and management in college canteens. Students can order food online and track their order status.

Problem

- Long queues at canteen
- Manual order management
- Delay in food preparation

Solution

- Online food ordering
- Digital order management
- Real-time order tracking

Technology Stack

Frontend

- React
- Tailwind CSS

Backend

- Node.js
- Express.js

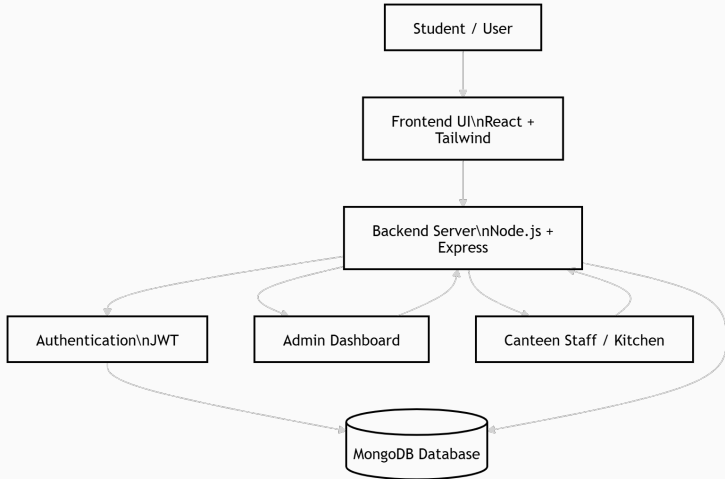

Database

- MongoDB

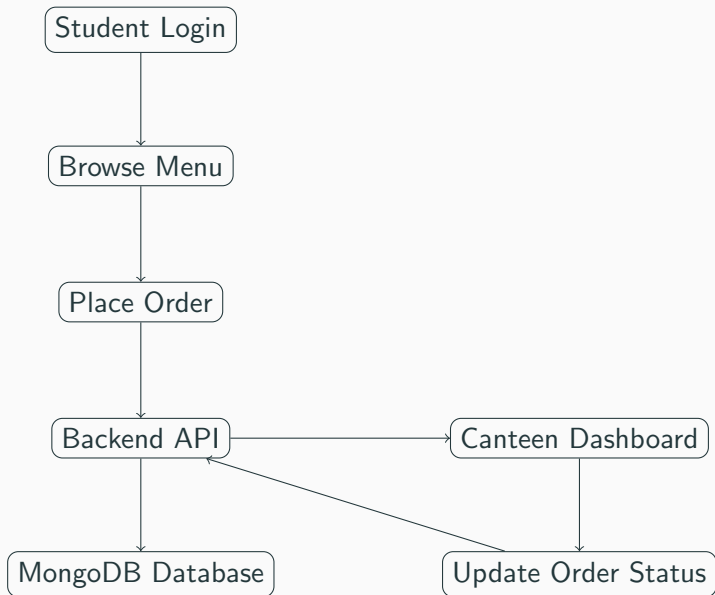

Security & Deployment

- JWT Authentication
- GitHub
- Vercel (Frontend)
- Render (Backend)

System Architecture

System Flow

Backend API Structure

Authentication APIs

- POST /register
- POST /login

Order APIs

- GET /menu
- POST /order/create
- GET /order/my-orders
- GET /order/all (Admin)
- PATCH /order/update-status

Security

- JWT based authentication
- Role-based authorization

Key Features

Online Food Ordering

Students can order food directly from their mobile or laptop.

Order Tracking

Students can monitor the status of their food orders in real time.

Secure Authentication

JWT-based login system with role verification.

Admin Dashboard

Canteen staff can manage incoming orders and update their status.

Comparison with Existing Systems

Feature	Manual System	Existing Systems	Proposed System
Food Ordering	Offline	Limited	Online Portal
Queue Management	No	Partial	Yes
Order Tracking	No	No	Yes
Digital Payments	No	Limited	Yes
Central Dashboard	No	No	Yes

Project Workflow

Planning

- Define project objectives
- Identify system users
- Analyze canteen management problems

Design

- System architecture
- UI wireframes
- Database design

Development

- Backend API creation
- Authentication system
- Frontend interface development

Deployment

- Integrate frontend and backend
- Deploy using Vercel and Render
- Connect MongoDB database

Project Status

Completed

- Requirement Analysis
- System Architecture
- Database Structure

In Progress

- Backend API Development
- Order Management System
- Frontend UI Development

Current Phase: Development

Impact of the System

- Reduced waiting time in canteen
- Faster food service
- Digital order records
- Efficient canteen management
- Improved student experience

Smart Features

- AI-based food recommendations
- Automatic order prioritization
- Smart inventory management

System Improvements

- Real-time notifications
- Analytics dashboard

Thank You
